The Failing MA Risk Adjustment Model:
Stifling Competition and Wasting Taxpayer Dollars

Risk adjustment payments provide insurers resources to care for seniors with complex and costly health needs. With all insurers having a mix of healthy and high-acuity seniors, the significant variation in risk adjustment is simply the result of abusing complexities in the current program. These abuses create an inequitable market, disadvantage consumers in regional health plans and cost taxpayers tens of billions of dollars.

Average MA Risk Scores by Insurer (2019–2023)
